

the calibration series:
one click per coefficient

the loader:
refusals at load

the detector's
window closes

the reader,
after the run

nature's clicks

clicks of bound bodies
against a declared clock;
the measured numbers,
never a GameBoard reading

the files

the universe file: the pairs
[num, den], Γ , T , the
holders' weights; the world file:
the Nodes, the lays, the faces;
the detectors' four declarations

the GameBoard

a NodeState at every Node;
one interval: Rule3 on the
six Ports, the read, the write;
reversible, integers, no draw

the click lines

the only measurement:
region, the detector's clock
and window, family, count;
the instrument's draw by
the shares, its declared seed

the reading

the blind row written before
the run beside the run's row,
its deviation and extrema;
the back-in-time gate: MATCH

compared only here, click against click: the paper claims the method, never that nature is so

the three layers of
the method, each with
a fixed and a free part:

the numbers:
all free, as few
as the rule allows

the board's rules:
Rule3 fixed,
the file's rows free

the click: its one
form fixed, the four
declarations free
